UPGRADE YOUR WOOD STOVE OR FIREPLACE

Did you know?

Swapping out one old, inefficient wood stove is similar to taking 5 dirty old diesel trucks off the road. The tiny particles in wood smoke can affect your health, but with a few simple steps you can help reduce wood smoke to protect your health and the air we breath.

- Upgrade to a cleaner EPA certified gas or wood stove
- Burn dry, seasoned wood
- Burn wood with low moisture content
- Provide sufficient air to the fire; never let it smolder

\$1,500 REBATE per stove replaced per household

The Lassen County Air Pollution Control District's **Wood Stove Replacement Program** assists in replacing operable and older non-certified wood stoves with cleaner, more fuel efficient wood heating devices or other less polluting heating appliances. Replacements that may qualify for the rebate include: (1) Replacement of non-EPA certified and pre-1990 wood heating appliances or open hearth fireplaces with EPA certified appliances, and (2) Replacement of non-EPA certified and pre-1990 wood heating appliances with propane or natural gas appliance.

For more information, please contact the Lassen County Air Pollution Control District:
